

LM7800 Series 3-Terminal Positive Voltage Regulators

General Description

The LM7800 series of monolithic 3-terminal positive voltage regulators employ internal current-limiting, thermal shut-down and safe-area compensation, making them essentially indestructible. If adequate heat sinking is provided, they can deliver over 1.0A output current. They are intended as fixed voltage regulators in a wide range of applications including local (on-card) regulation for elimination of noise and distribution problems associated with single-point regulation. In addition to use as fixed voltage regulators, these devices can be used with external components to obtain adjustable output voltages and currents.

Features

- Output current in excess of 1.0A
- No external components
- Internal thermal overload protection
- Internal short circuit current-limiting
- Output transistor safe-area compensation
- Available in JEDEC TO-220 and TO-3 packages
- Output voltages of 6V, 8V, 18V and 24V (See Note)
- Available in extended temperature range

LM7818CT or LM7824CT
See NS Package Number T03B

Note: See General Purpose Linear Databook for specifications on similar devices with 5V, 12V, or 15V outputs. These parts can be found under LM140/LM340, LM140A/LM340A (for tighter output tolerance) and LM78XX datasheets.

Absolute Maximum Ratings

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Storage Temperature Range

TO-3 Metal Can	-65°C to +175°C
TO-220 Package	-65°C to +150°C

Operating Junction Temperature Range

Extended (LM7800)	-55°C to +150°C
Commercial (LM7800C)	0°C to +150°C

Lead Temperature

TO-3 Metal Can (Soldering, 60 sec.)	300°C
TO-220 Package (Soldering, 10 sec.)	265°C

Power Dissipation

Internally Limited

Input Voltage

6.0V to 18V	35V
24V	40V

ESD Susceptibility

(to be determined)

Design Considerations

The LM7800 fixed voltage regulator series has thermal overload protection from excessive power dissipation, internal short circuit protection which limits the regulator's maximum current, and output transistor safe-area compensation for reducing the output current as the voltage across the pass transistor is increased.

Although the internal power dissipation is limited, the junction temperature must be kept below the maximum specified temperature (150°C for LM7800, 125°C for LM7800C) in order to meet data sheet specifications. To calculate the maximum junction temperature or heat sink required, the following thermal resistance values should be used:

Package	Typ θ_{JC} °C/W	Max θ_{JC} °C/W	Typ θ_{JA} °C/W	Max θ_{JA} °C/W
TO-3	3.5	5.5	35	40
TO-220	3.0	5.0	40	60

$$P_{D \text{ Max}} = \frac{T_{J \text{ Max}} - T_A}{\theta_{JC} + \theta_{CA}} \text{ or}$$

$$= \frac{T_{J \text{ Max}} T_A}{\theta_{JA}} \text{ (without heat sink)}$$

$$\theta_{CA} = \theta_{CS} + \theta_{SA}$$

Solving for T_J :

$$T_J = T_A + P_D (\theta_{JC} + \theta_{CA}) \text{ or}$$

$$= T_A + P_D \theta_{JA} \text{ (without heat sink)}$$

Where:

T_J = Junction Temperature

T_A = Ambient Temperature

P_D = Power Dissipation

θ_{JC} = Junction-to-Case Thermal Resistance

θ_{CA} = Case-to-Ambient Thermal Resistance

θ_{CS} = Case-to-Heat Sink to Thermal Resistance

θ_{SA} = Heat Sink-to-Ambient Thermal Resistance

θ_{JA} = Junction-to-Ambient Thermal Resistance

Typical Applications

Fixed Output Regulator

TL/H/10052-7

High Input Voltage Circuits

TL/H/10052-8

Note 1: To specify an output voltage, substitute voltage value for "00".

Note 2: Bypass capacitors are recommended for optimum stability and transient response, and should be located as close as possible to the regulator.

TL/H/10052-9

High Current Voltage Regulator

$$\beta(Q1) \geq \frac{I_{O \text{ Max}}}{I_{\text{REG Max}}}$$

$$R1 = \frac{0.9}{I_{\text{REG}}} = \frac{\beta(Q1) V_{BE(Q1)}}{I_{\text{REG Max}} (\beta + 1) - I_{O \text{ Max}}}$$

TL/H/10052-10

Typical Applications (Continued)

High Output Current, Short Circuit Protected

$$R_{SC} = \frac{0.8}{I_{SC}}$$

$$R1 = \frac{\beta V_{BE}(Q1)}{I_{REG Max} (\beta + 1) - I_{O Max}}$$

TL/H/10052-11

Positive and Negative Regulator
